Bengaluru

Professional Summary

- Frontend Engineer with 4 years of experience building scalable fintech platforms using React.js, TypeScript, and Redux. Experienced in architecting modular UI systems, optimizing performance, and delivering production-grade applications supporting over **50,000+** users. Strong expertise in state management, API integration, and performance-driven frontend engineering.

Technical Skills

- Languages:** JavaScript (ES6+), TypeScript
- Web Technologies:** HTML5, CSS3
- Frontend:** React.js (Hooks), Redux, Context API
- Styling & UI:** SASS/SCSS, Tailwind CSS, Material UI, Responsive Design
- Performance:** Code Splitting, Lazy Loading, Memoization, Render Optimization
- Tools & Build:** Webpack, Vite, Babel, NPM, Yarn, Git
- APIs:** RESTful APIs, API Integration, JWT, Error Handling

Experience

- Wortgage Finance Pvt Ltd** April 2022 – Present
Frontend Engineer Bengaluru
 - Developing and enhancing a large-scale Lender Portal managing the end-to-end loan lifecycle including eligibility checks, underwriting, approval workflows, document processing, disbursement tracking, and bank verification.
 - Architected modular, reusable component systems with configuration-driven dynamic forms based on API metadata, enabling scalable multi-step workflows with complex validation and conditional rendering.
 - Designed scalable state management using Redux and Context API with role-based access control to maintain secure, predictable cross-module workflows.
 - Improved performance by reducing unnecessary re-renders by **40%** and optimizing initial load time by **30%** using memoization, selective state updates, code splitting, dynamic imports, and lazy loading.
 - Built reusable custom hooks and shared utilities for API handling, pagination, debouncing, data transformation, workflow orchestration, and schema-based validation.
 - Developed a high-performance data table system handling **10,000+** records with server-side pagination, filtering, sorting, and export capabilities.
 - Improved production stability through reusable validation utilities, structured error handling, proactive debugging, and participation in architecture discussions and code reviews.
 - Developed Partner Portal modules for onboarding, KYC, lead creation, document submission, and Action Dashboard, supporting **20,000+** partners and driving **60%** of total loan applications.
 - Streamlined Partner onboarding by optimizing KYC validation, document verification, and approval flows, improving activation efficiency and reducing processing time.
 - Built Customer Application supporting end-to-end loan journeys with real-time tracking, serving **50,000+** customers and improving onboarding completion by **20%**.
 - Enhanced Customer loan UX with progressive validation and responsive improvements, reducing drop-offs and increasing completion consistency.

Key Achievements

- Performance Enhancement:** Improved Lighthouse performance score from **60** to **85** by optimizing bundle size and implementing lazy loading strategies.
- Architecture Ownership:** Designed reusable UI component patterns that accelerated development cycles and improved long-term maintainability.
- Workflow Automation:** Automated financial workflow validations, reducing manual operational effort by 25% and minimizing data inconsistencies.
- Production Reliability:** Strengthened production stability by introducing structured error handling and proactive debugging approaches.
- Team Impact:** Actively mentored junior developers and standardized coding practices to ensure scalable and clean codebase growth.

Education

- VBVP, Andhra Pradesh**
B.Tech

August 2017 – September 2020
